By Sandrine Dudoit, Mark J. van der Laan : Multiple Testing Procedures with Applications to Genomics (Springer Series in Statistics) variations and sub classes statistical hypothesis testing is a key technique of both frequentist inference and bayesian inference although the two types of fractal cancer 4620000 google hits july 17 2017 fractal cancer 4240000 google hits june 28 2017 fractal cancer 1730000 google hits june 5 2017 Multiple Testing Procedures with Applications to Genomics (Springer Series in Statistics):

3 of 3 review helpful multiple testing with microarrays By Michael R Chernick The traditional approach to multiple testing or simultaneous inference was to take a small number of correlated or uncorrelated tests and estimate a family wise type I error rate that minimizes the the probability of just one type I error out of the whole set when all the null hypotheses hold Bounds like Bonferroni or Sidak were sometimes used This book establishes the theoretical foundations of a general methodology for multiple hypothesis testing and discusses its software implementation in R and SAS These are applied to a range of problems in biomedical and genomic research including identification of differentially expressed and co expressed genes in high throughput gene expression experiments tests of association between gene expression measures and biological annotation metadata sequence analysis From the reviews This book summarizes the recent work of Sandrine Dudoit and Mark van der Laan on multiple testing It proposes a general framework for multiple testing procedures MTPs and introduces new concepts hellip The authors also provide cod
