0 of 0 review helpful Interesting new look at the very old subject By DigitalAge2013 I like it but only as a supplement to Coursera course 2 of 2 review helpful A Paradigm Shift By Mark Dubin This book describes a fundamental shift in understanding how the visual system makes sense of what is seen It is a must read for those interested in perception and in informati This provocative book reviews a broad range of evidence leading to the conclusion that the visual system is not organized to generate a veridical representation of the physical world but rather a statistical reflection of

the visual history of the species and the individual observer Thus what humans actually see is a reflexive manifestation of past rather than a logical analysis of the present The idea that the images we consciously entertain represent the historical will remind vision researchers of James Gibson s and David Marr s seminal efforts and it may prove as influential mdash Vincent A Billock Science brings the problem to life using a series of computer generated illustrati
