Julie Williams Virginia Man Yee Lee Parkinson's disease is a common neurodegenerative condition with an estimated prevalence of approximately 1 in 100 persons. Parkinson's disease is characterized by Pathogenesis of Neurodegenerative Disorders (Contemporary Neuroscience):

As the average life expectancy of many populations throughout the world increases so to does the incidence of such age related neurodegenerative disorders as Alzheimer's Parkinson's and Huntington's diseases. Rapid advances in our understanding of the molecular genetics and environmental factors that either cause or increase risk for age related neurodegenerative disorders have been made in the past decade. The ability to evaluate at the cellular and molecular a timely collection of 12 papers authored by 26 experts mechanisms combined with specific molecular genetic and environmental factors are responsible for the development of the diseases that are covered in a concise manner in subsequent chapters. The
