**By M.-F. Schulz-Aellen : Aging and Human Longevity** evolutionary theories of aging are useful because they open new opportunities for further research by suggesting testable predictions but they have also been harmful ageing or aging see spelling differences is the process of becoming older the term refers especially to human beings many

animals and fungi whereas for example Aging and Human Longevity:

The proportion of elderly people continues to increase in the western world nearly a quarter of the population will be over 65 years by the year 2050 Since aging is accompanied by an increase in diseases and by a deterioration in well being finding solutions to these social medical and psychological problems is necessarily a major goal for society Scientists and medical practitioners are therefore faced with the urgent task of increasing basic knowledge of the biology of aging From the Back Cover This book combines a scientific and medical description of aging with a critical review of ways to prolong life The first part gives an overview of the complex biological mechanisms of aging and of the consequences of tissue and system aging
