Plants are amazing organisms to study some are important sources for pharmaceuticals and others can help to elucidate molecular mechanisms required for a plant's development and its interactions with the biotic or abiotic environment Functional genomics is vastly lagging behind the speed of genome sequencing as high throughput gene function assays are difficult to design specifically for non model plants Bioinformatics tools are useful for gene identification From the Back Cover Plants are amazing organisms to study some are important sources for pharmaceuticals and others can help to elucidate molecular mechanisms required for a plant's development and its interactions with the biotic or abiotic environment
